

Calculator Manual

Welcome to the Aldo 2021 Calculator v1.

Calculator has been designed to teach basic math operations as well as to perform advanced complex calculations

1. Summary

This calculator consists of numbers and arithmetic operators that can be used to perform calculations and then display the answer on a screen. Values can be stored to a memory file and then re-called for later use in calculations. The memory file can also be cleared and the contents removed from the storage file. A clear button can be used to clear contents that are currently on the active screen.

2. Key Features

- Numbers can be entered into the calculator and then viewed on the screen
- Calculator can perform Multiplication , Division, Addition and Subtraction functions
- Equals sign can be used to perform arithmetic's and then display answers on the screen.
- Values on the screen can be stored to memory and then recalled for later usage
- Values can be removed from the Memory storage file.

3. Buttons & Layouts

- Numbers

The following buttons below on the calculator can be used to represent the following inputs for number values

1	=	Number 1
2	=	Number 2
3	=	Number 3
4	=	Number 4
5	=	Number 5
6	=	Number 6
7	=	Number 7
8	=	Number 8
9	=	Number 9
0	=	Number 0
,	=	Comma

- **Arithmetic Operators**

The following buttons below on the calculator can be used to represent the following inputs for mathematical operations

Equals = =

Addition = +

Subtraction = -

Multiplication = *

Division = /

- **Memory Functions**

The following buttons below on the calculator can be used to represent the following inputs for mathematical operations

MR = **Memory Recall**

M+ = **Add number to memory (Text File)**

M- = **Remove number from Memory (Text File)**

4. Conclusion

Thank you for purchasing the v1 calculator edition. We hope you have developed , learned and improved your mathematical operations and that you enjoyed using our application.
